

Hot Dipped Galvanized Steel Coil

Application

The hot dipped galvanized steel coil has a wide application in industrial fields, including construction, light industry, automobiles, agriculture, and commercial industries. Hot dipped galvanized steel coils are used to manufacture corrosion resistant roof panels and roof gratings, and are also used as the raw material for corrosion resistant components in automobiles. Other industries make use of the galvanized steel coils for transportation of food and packaging.

Details

Standard: DIN, GB, JIS

Grade: SGCH Q195 SPCC

Thickness: 0.13-2.0mm

Width: 600mm to 1250mm

Type: steel coil

Technique: cold rolled

Surface Treatment: galvanized

Application: light industry

Weight of each package: customized
